

I drive 55 miles into the Philadelphia area each day. I cannot reliably receive the local radio stations until I've already made my decision on what route I will take. Because of this, I listen to XM radio to get my local traffic report. Without it, I'm "driving blind." If the NAB wants XM radio to stop broadcasting traffic reports, what will they do to ensure we all can receive the land based broadcasts and not just those who are conveniently located near the broadcasting stations?
